

Step 1

Clear any objects you do not want to cut around from your garage. Sweep excess dirt and dust from the floor.

Step 2

Begin installation along the longest side wall and the garage door.

Step 3

Lay two tiles on the ground with the lugs of one module aligned over the loops of another. Step firmly onto them to lock the lugs into the loops.

Step 4

Lay a single row of tiles along the garage wall, leaving a 1/4" to 1/2" gap between it and the flooring.

Step 5

Continue your installation across the garage door forming an "L" shape with your garage flooring.

Step 6

Fill in the "L" by moving across the garage opening and down the longest wall repeatedly.

Step 7

Cut the floor to any size or shape using a table saw, jigsaw, utility knife, etc.. **Follow manufacturer's safety guidelines with these tools.**

Step 8

Celebrate your choice of RaceDeck Garage Flooring by enjoying your favorite beverage while admiring your handy work.
